```java
import java.util.*;
public class Demo
{
        public static void main(String[] args) {
                Scanner s=new Scanner(System.in);
                System.out.println("enter any no:");
                int M=s.nextInt();
                if(M%3==0 && M%5==0)
                    System.out.println("Good Number");
                else if(M%3==0 && M%5!=0)
                    System.out.println("Bad Number");
                else if(M%3!=0 && M%5==0)
                    System.out.println("Poor Number");
                else
                    System.out.println("-1");
        }
}
```
